1) A hospital has patient records for many years. How can Data science be applied?

A) Data science can analyze historical patient records to identify disease patterns, risk factors, and treatment outcomes. it can help doctors predict diseases and make better healthcare decisions

2) A bank wants to detect suspicious transactions. How can data science be useful

A) Data science can analyze transaction data and identify unusual patterns, such as unexpected amounts or locations. This helps bank detect fraudulent and suspicious transactions

3) A school wants to improve student performance mention one benfit of data science in this case.

A) Data science can analyze students marks attendence, and learning patterns. it can identify students who need additional support and help teachers provide personalized learning to improve their performance

4) A Transport department wants To reduce Traffic congestion. How can data science be applied

Data science can analyze Traffic volume, vehicle movements, road conditions, and Travel patterns. The results can be used

To Predict Traffic congestion and improve routes, Traffic signals, and Transportation planning.

5) A company has data in excel tables, customer reviews, images, and videos. which fact of data is shown here.

A) This represents the variety facket of data variety refers to presence of different types and formats of data such as structured data in Excel, text in reviews, and unstructured data such as images and videos.

6) A university stores student details in rows and coolmns. what type of data structure is this

A) This is structured data. structured data is organized in a fixed format, usually in rows and columns making it easy to store, search, and analyse using data bases or spreadsheets.

7) A company collects a very large amount of daily user activity data from its mobile apps which Big Data characteristics is applied.

A) The Big data characteristic is volume. volume refers to the huge amount of data genterated and collected from different sources, such as mobile applications, websites, and users.

8) A busines wants to convert customer data into useful sales decisions. which Big data characterstic is important:

A) The important Big data characterstic is value. value means extracting useful information and insigts from colleted

data to support business decisions and improve sales.

9) A company wants to process large datasets using parallel computation. which Big Data tool can be used?

A) Apache spark can be used to process large datasets using Parallel computing. it divides the processing work across multiple computers, making Big Data processing faster and more efficient

10) A company wants to visualize Big Data results for decision-makers. which tool or method can be applied?

A) Data visualization can be used to present Big Data results through charts, graphs, and dashboards. Tools such as Power BI and Tableau help decision-makers understand data easily and make better decisions.
